How To Add Social Share Buttons In WordPress 2025 Course

Hi! Welcome to the 8th lecture of the WordPress Course 2025. In today's guide, we'll learn how to add social share **buttons to your WordPress website**. Social share buttons allow visitors to share your content on platforms like Facebook, Twitter, WhatsApp, and more.

These buttons make it easy for your audience to spread the word about your site's content. They improve your website's visibility and bring in more traffic. We'll use the AddToAny Share Buttons plugin in this tutorial. By the end, you'll know how to install, activate, and customize the plugin to display share buttons on your site.

What Are Social Share Buttons?

Social share buttons are icons that let your visitors share your content directly to their social media accounts. These buttons can appear:

- On the side of your webpage as floating icons.
- At the top or bottom of your blog posts or pages.
- In a sticky bar that stays visible as users scroll.

Adding social share buttons encourages users to share your content. This helps your website gain more exposure on social media platforms.

Why Add Social Share Buttons?

There are several benefits of adding social share buttons to your site:

1. **Increase Traffic:** When visitors share your content, it reaches a wider audience. This brings in more traffic to your website.
2. **Boost Engagement:** Social sharing allows users to engage with your content by sharing it with their friends and followers.
3. **Improve SEO:** Search engines notice when content is shared often, improving your site's search rankings.
4. **User-Friendly:** Social share buttons make it easy for your audience to promote your website.

Now that we know the benefits, let's move on to the steps to install and activate these buttons.

Step 1: Installing the AddToAny Share Buttons Plugin

To start, we need to install the AddToAny Share Buttons plugin. Follow these simple steps:

2. On the left-hand menu, click on *Plugins*.
3. Select *Add New*.
4. In the search bar, type **AddToAny Share Buttons**.
5. Click on the *Install Now* button.

The AddToAny plugin is popular because it's easy to use, lightweight, and supports multiple platforms. The installation process will take a few seconds.

Step 2: Activating the Plugin

After installing the plugin, you must activate it. Without activation, the plugin won't work. Here's how:

1. Once the installation is complete, you'll see an *Activate* button.
2. Click on *Activate* to enable the plugin.

When the plugin is activated, you'll see its menu in your WordPress dashboard. This is where you can customize the settings.

Step 3: Accessing the Plugin's Settings

After activating the plugin, the next step is to access its settings. Here's how:

1. Go to your WordPress dashboard.
2. Click on *Settings*.
3. Select *AddToAny Share Buttons*.

This page lets you configure how the buttons will look and where they'll appear on your website.

Step 4: Customizing the Social Share Buttons

Customization is key to ensuring the social share buttons match your website's design and functionality. Here are some options you can customize:

- **Add or Remove Services:** Choose which social platforms (e.g., Facebook, Twitter, WhatsApp) to include.
- **Placement:** Decide where the buttons will appear—at the top, bottom, or sides of your content.
- **Floating Icons:** Enable floating icons that stick to the screen as users scroll.
- **Icon Size:** Adjust the size of the buttons to fit your design.
- **Advanced Options:** Add custom JavaScript or CSS for more control over the buttons' appearance.

Spend some time exploring these settings to make sure the buttons suit your site's needs.

Step 5: Saving Changes

Once you've customized the buttons, it's important to save your settings. Here's how:

1. Scroll to the bottom of the plugin settings page.
2. Click on the *Save Changes* button.

After saving, refresh your website to see the updated social share buttons.

Step 6: Viewing Social Share Buttons on Your Site

Now, visit your website to check if the social share buttons are visible. Depending on your settings, the buttons might appear:

- As floating icons on the side of the page.
- Inline, at the top or bottom of your blog posts.

Click on a button to test if it works. This ensures visitors can share your content seamlessly.
